

# Biology Research Seminar

Monroe Hall, Room 610  
12:30 - 1:30 pm

November 11

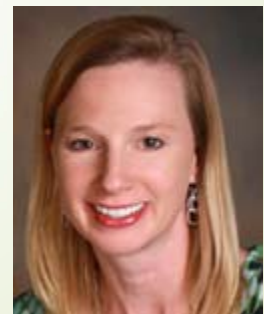

***“Buffering the long term impact of early life stress.”***

**Dr. Stacy Drury**

*Tulane University*

.....

Dr. Drury explores how the interaction of genetic and epigenetic factors with early experience shapes neurodevelopment and long term health outcomes in children. Her clinical practice and translational research focuses on improving long-term outcomes in at-risk children and infants through an enhanced understanding of the interaction between early life experiences, the stress response systems, and child health and neurodevelopment.
